Bata Industrials[®]

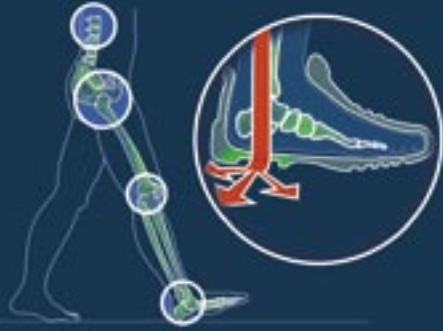

FOOTWEAR BEYOND SAFETY

Safety, health and comfort

Bata Industrials: Everything for working feet according to the latest European safety norms.

All Bata Industrials safety shoes are equipped with a steel toecap, but right protection on the work floor requires more than that. It is well-known that a lot of absence and sickness costs are caused directly or indirectly by unsuitable footwear. For example, an inappropriate type of sole can lead to unnecessary slipping, while some foot, ankle and low back pain can arise from a poor fit or lack of support. The Spirit[®], WorkMates[®] and SportMates[®] collections from Bata Industrials enable you to avoid similar problems very simply, because these collections have everything you can expect from a genuine Bata safety shoe.

An important distinguishing feature is the ingenious Bata Industrials Tunnel System®, a built-in shock absorber. When depressed, the characteristic recess in the heel deforms in order to distribute the pressure over a larger surface area. This spares the joints and keeps the wearer upright. By giving the heel extra stability, the Tunnel System® helps to prevent fatigue and loss of concentration and therefore avoids many accidents. Available in collections Spirit® and WorkMates®.

GENUINE BATA:
SAFETY, HEALTH AND COMFORT

Bata Industrials is a specialised division of the world's largest shoe manufacturer, the Bata Shoe Organisation. Our safety footwear embodies about a hundred years' experience. We combine it with the most modern materials and technology, and the latest insights in the field of kinetics and hygiene, in order to expand our boundaries constantly. Everything is focused on guaranteeing the wearers of our shoes maximum health and comfort in addition to protection.

EUROPEAN SAFETY NORMS

All models within the Bata Industrials range comply fully with the European safety norms EN ISO 20345.

- SB** Safety footwear for use in DRY conditions.
 - steel toecap
- S1** Safety footwear for use in DRY conditions.
 - As SB plus antistatic properties, energy absorption of seat region and closed heel
- S1 P** Safety footwear for use in DRY conditions with possible sharp objects on the ground i.e. nails or glass.
 - As S1 plus steel mid-sole
- S2** Safety footwear for use in WET conditions.
 - As S1 plus water resistance and water absorption of upper material > 60 minutes
- S3** Safety footwear for use in WET conditions with possible sharp objects on the ground i.e. nails or glass.
 - As S2 plus steel mid-sole and profiled outsole

THE RIGHT SPIRIT® FOR EVERYONE

The Spirit® collection comprises 8 models and is available in the standard sizes 39 through 48. Three models are even available from size 36, so that women can also work with the right Spirit®. All models are fitted with a steel toecap and steel mid-sole to protect feet against sharp objects. Thanks to its good qualities and many models, Spirit® can be used for heavy duty and light applications in order to enhance work comfort and reduce sickness absence. These safety shoes are very popular everywhere because they look smart, they are well finished and are comfortable to wear. And because they keep the wearer fit during work.

EVERY INCH THE SPIRIT OF BATA

At Bata Industrials it all starts with a good fit. The Spirit® collection is also based on a special, anatomically-shaped last. With sufficient space around the forefoot and instep to ensure extra stability and comfort. Furthermore, the sole has a strong antislip effect, and the top and lining are made from light, breathable materials in order to keep the feet dry and fresh. The effect of this climate management is maximised when combined with Bata Industrials socks that have been developed specially for this purpose. Spirit®'s full inlay sole and its well-finished design are also notable. Take, for example, the subtle way in which, in certain models, the external toecap has been integrated in the design.

SKADI | S3

The PU/TPU-sole of Spirit® provides grip on the work floor even in the event of unexpected movements. The mid-sole is made of flexible polyurethane (PU) that provides extra absorption. The thermoplastic polyurethane (TPU) outsole has a high slip resistance and is extremely durable. The sole also features Bata Industrials' unique energy returning Tunnelsystem®.

WORKMATES®

WorkMates® are an economical range offering premium styling and features.

WorkMates® have been designed to improve your well being, health and safety. The dual density polyurethane (PU) sole features Bata Industrials' unique energy returning Tunnelsystem®. A wide stable footbed and antislip tyre tread sole pattern reduce the risk of ankle roll and increase slip resistance. The black smooth leather adds the finishing touch to these 'workers' available in sizes 36 through 48.

The flexible dual density PU-sole of WorkMates® gives excellent grip on the work floor. Shock absorption and cushioning are provided by the integrated Tunnelsystem® and PU mid-sole. The sole features a defined heel strike for ladder use.

SPORTMATES®

SportMates® are the latest in sports styled safety footwear from Bata Industrials. The collection consists of three models all provided with the protection of steel toecaps. The lightweight SportMates® are equipped with a dual density EVA/rubber-sole for maximum protection against slipping. SportMates® are perfect for men and women, available in sizes 35 through 48.

FOOTWEAR BEYOND SAFETY BY BATA INDUSTRIALS

Modern professionals demand more than safety for their feet. They also want a shoe that is comfortable and which keeps them healthy and fit while they work. Employers know how important this is. The demands of the work floor guide our daily efforts in the field of research, development and design. And spur us on far beyond the current norms. Far beyond in safety. Far beyond in grip and support. But also far beyond in fit and comfort. That is why every shoe lives up to our promise and why Bata Industrials has become synonymous with the superior safety shoe.
